**I. Rejection of claims 1-3,7,13,15-21,23 under 35 U.S.C. 103(a) over Hayes on record will be maintained for reasons record and reasons as follows.**

Applicant argues that Hayes reference is not relevant prior art to the present invention. Applicant states that the present invention concerns particular salts of transition metal chelators. And Hayes does not disclose salts of chelators and contains nothing to suggest that the particular transition metal salts of the present invention would have the present benefits.

Examiner argues that Hayes teaches a composition comprising DPTA and salts (MgSO<sub>4</sub> and NaCl). Such a combination would result in the Na and/or Mg salt of the transition metal chelator (DPTA). In a claim to a composition, its benefits (uses) have no patentable significance.

**II Claim Objection**

Claims 4-6,8-12,14,22,24-27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not suggest the composition comprising the compounds of these claims.
